Dear Physician,

Your patient is curious about AVISE SLE Monitor, a unique laboratory test to help monitor SLE disease activity. This new tool leverages the power of Erythrocyte Bound C4d (EC4d), a patented biomarker, along with 4 additional serologic measures designed to provide you with greater insight into SLE disease activity.

Only AVISE SLE Monitor from Exagen offers this unique combination:

- EC4d: SLE disease activity biomarker measuring deposits resulting from complement activation¹
- PC4d: Patented CB-CAP significantly associated with history of thrombosis and all-cause mortality
- Anti-C1q: SLE disease activity and lupus nephritis monitoring marker¹
- Anti-dsDNA by CIA: Sensitive biomarker with superior association with disease activity compared to other dsDNA methods
- C3/C4: Major proteins of the complement process playing a key role in the inflammatory and immune system

If you have not already discovered AVISE testing we will make it easy to get started, just a call at 888.452.1522 or email us at info@exagen.com. We will send you a starter kit including; pre-paid shipping, test requisition forms and instructions for specimen submission. We thank you for your consideration and look forward to supporting you and your patients.

Sincerely,

Exagen Provider Relations Team
