Dear Physician,

Your patient has requested information and is curious about new tools that can aid in therapeutic drug monitoring for Methotrexate and Hydroxychloroquine.

AVISE® MTX (Methotrexate) provides accurate measurement of active methotrexate polyglutamates (MTXPGs) to help physicians appropriately assess their patients' MTX exposure to optimize therapy.

AVISE® HCQ (Hydroxychloroquine) is an advanced drug monitoring test that provides accurate measurement of HCQ levels in whole blood to help physicians assess their patients' exposure to HCQ therapy.

Both AVISE MTX & AVISE HCQ are available on AVISE Touch, which is a simple-to-use low volume capillary collection device.

To get started or learn more please give us a call at 888.452.1522 or email us at info@exagen.com and we will send you a starter kit including; pre-paid shipping, test requisition forms and instructions for specimen submission.

We thank you for your consideration and look forward to supporting you and your patients.

Respectfully,

Exagen Provider Relations Team
